PRODUCTION OF "C" PROFILES 41X21 – 41X41 – 41X61

We have produced these profiles for many years and have great **experience** with them together with delivery speed. The tooling we have is **combinable**; therefore it allows us to pass from one measure or from one thickness to another in a very short time.

Possible measures:

32x20 thickness 2,5

30x15 thickness 1,5

41x21 thickness 1,5 - 2,0 - 2,5

41x26 thickness 1,5 - 2,0 - 2,5

41x41 thickness 1,5 - 2,0 - 2,5

41x61 thickness 2,0 - 2,5

41x81 thickness 2,0 - 2,5

Material pre-galvanized, pickled or stainless steel

These products are delivered complete with holes on one or three sides and with internal knurling. They are particularly indicated for the execution of **fixing of shelves** for various sectors: photovoltaic, air conditioners, continuous and ventilated façades, cable channels, gangways, etc.

The **PM** roll forming lines have **high** constructive and quality **standards** which allow the production of profiles always according to the wishes of the client. On this line we have installed a special electronic feeder which allows great punching precision without influencing the working speed.
